dered; but everyone must give them something, even 'ten or eleven cobs of millet'. The same procedure of payment applies to the village undertaker and the man who calls the prayer-times (muazzin) and the postman. In the case of the man who leads the prayers (imam), villagers send his 'custom' to his home, besides the small amount of money he receives from the 'Ministry of Religious Endowments'. In other words, the artisans as a group are maintained by the community they serve, and are not paid by a fixed price for their results. There is an observable change in this 'maintenance basis' especially in the case of the carpenter on his making of furniture and doors.

The members of the third family of strangers are Christians (Coptic Church) who mainly derive their livelihood from the income of their corn mill and who live on the other side of the railway track. They had monopolized milling for twenty years. Then four persons from the village in competition started another corn-mill. Both these undertakings later co-operated and raised the charges, and it was this that gave an impetus to the whole village last year to establish a communal corn-mill.

The fourth family which has a specialized job is that of the water-carriers who are also alien to the village. They live on its western border nearer to the Nile from which they draw water to distribute in water-skins to the homes of government officials, shopkeepers, childless couples and others, when extra water is required. They are paid either in bread, corn, or money, according to what they bring, and not on a 'maintenance basis' as their comparatively late arrival in the village has been welcomed by government officials, policemen, or childless people.

Sixty years ago the first shop was opened in the village by a family called al Hudoor from Esna, in the Province of Kena.[1] Ten years later the first man from the village itself opened the second shop. At present, there are about thirty shops of varying size which have mostly started up during the last ten years. Payment for goods sold has been, more often than not, at the end of the harvest period. The shopkeepers keep an account of what customers buy, to be presented to them at this time. The same applies at present to most of the village government officials or wage-earners, who pay their bills for purchased goods at the end of the month.

The market-day, held every Saturday (i.e. at the beginning of the week), is the main day for buying and selling. On this day economic as well as social exchange takes place, and it is said, 'Even to get the market's dust is better than not going to it'. Until three years ago the majority of the traders came from Edfu, the nearest town to Silwa. Retail traders, shoemakers, butchers, silversmiths, and coffee-makers come in to sell the villagers their goods, while commercial dealers buy crops, sheep, chickens and eggs. Since then, the number of traders from Edfu has diminished considerably, as a result of the increase in the number of village traders.

[1] Plural of 'al Hadari' meaning coming from the town, which was the name given to them by the villagers at that time and which they still retain.

THE FELLĀḤIN OF UPPER EGYPT

In the chapter dealing with survivals it will be seen that some of these harvest customs can be definitely dated back to very early times in the history of the country.

I have stated above that harvesters are usually paid in kind instead of in cash, and that the women and young girls carry these wages home on their heads. The methods of threshing and winnowing the corn received as wages are more primitive than those already described in this chapter. The threshing is done by beating

FIG. 109. THRESHING WITH A STICK

with a stick (Fig. 109), and this process is often, though not always, carried out by the women. When threshed the corn is usually placed in a large, round tin bath, and the winnowing is done by simply taking up the grain in the hands and throwing it into the air (Fig. 110). The chaff is blown away by the wind, the grain falling down again into the bath. It then goes through a second process of winnowing with a sieve.

The grain, when required for use, is ground in primitive hand-mills, and "two women . . . grinding at the mill" is quite a common sight in Egyptian villages (Fig. 111). The stones from which these hand-mills are made are obtained, so I was informed, from the desert, and are chipped into the desired shape. The flour is very coarse after this grinding, and, moreover, after it has fallen

least one mill worked by steam, and the women take their flour there to be ground for a second time. During this process many of the impurities are removed from the flour.
